1. Start by opening the hood on your vehicle and removing the plastic core support cover. This can be done by removing the plastic push pull rivets. This will make reaching behind the stock grille shell possible. Now place the supplied 10-24 x 2” bolt through the mounting tab in billet grille then bolt goes through bracket and then thread the bolt onto the wing portion (Fig B). Tighten bolts without over tightening--over tightening could cause the stock grille shell to crack. Note: A drop of red/blue loctite on the bolt threads with significantly reduce the chance of bolts backing out due to road vibrations.
